DATA SCIENCE(24AD3107)

2026-27, ODD Semester

ABSTRACT

Sec No-8	Team No- 1	E-commerce Sales Analytics Dashboard

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Name
Data Collection & Preprocessing	2420030013	K HARSHITH VARMA
Data Analysis & Insights	2420030123	G SANTHOSH
Dashboard & Visualization	2420030769	K SAI DANUSH

1. Abstract:

The E-commerce Sales Analytics Dashboard is a data analytics project designed to analyze and visualize e-commerce sales data in an easy and interactive way. The system collects sales information such as orders, products, customers, revenue, payment methods, and regions and presents it through meaningful charts, graphs, and key performance indicators. It helps identify top-selling products, sales trends, customer behavior, profitable categories, and overall business performance.

The dashboard allows users to quickly compare sales across different time periods, products, and regions. It can also help businesses understand customer purchasing patterns and identify areas where sales can be improved. By using data visualization and analytics, the dashboard converts large amounts of raw data into simple and useful information. This helps businesses make better data-driven decisions, improve sales strategies, understand customer needs, and increase overall business growth.

Techniques:

The project uses several techniques to convert raw e-commerce data into useful business insights. First, **data collection and data cleaning** are performed to remove missing, duplicate, and incorrect values. The cleaned data is then processed and organized for analysis. **Exploratory Data Analysis (EDA)** is

used to understand sales patterns, customer behavior, product performance, and revenue trends. **Data aggregation** is used to calculate important values such as total sales, total orders, and average revenue. **Data visualization** techniques such as bar charts, line charts, pie charts, and KPI cards are used to present the results clearly. Finally, these insights are combined into an **interactive dashboard** that helps users easily understand the business performance and make better data-driven decisions.
